Why Apache Tika?

Familiar Java	Build on our course experience. Keep the learning workload manageable.
Clear purpose	Identify file types and extract text and metadata from documents.
Active project	Recent development and public issues. Documented contribution guidance.
Suitable issues	Focused issues looked manageable. Clear examples we could investigate.

Why these issues?

TIKA-4431 / CSV #	A clear filename trigger. Focused fix with URL compatibility tests.
TIKA-4408 / Python	A reproducible detection-rule mismatch. Test Python cases and Shell controls.
TIKA-4694 / Word	Known stored metadata was missing. Existing APIs and a regression fixture.
TIKA-4083 / investigation	Distinct signature and sample files. A focused detection investigation.
