TWO MISSING COUNTS, ONE SMALL FIX

Why I chose it

A focused bug: old Word .doc files had stored line and paragraph counts that Tika did not return.

Technical decision

Use Apache POI's existing getters and Tika's Office metadata keys; omit missing counts.

```
set(Office.LINE_COUNT,
    summary.getLineCount());
set(Office.PARAGRAPH_COUNT,
    summary.getParCount());
```

2 production lines · no new dependency

Test it, integrate it, learn from it

01 Evidence: regression + build

Without the fix: regression fails. With it: 39 Word tests, 0 failures, 0 errors, 2 skipped (JDK 21).

02 Challenges and how I resolved them

Testing: Maven initially failed to download required dependencies. I later completed the build and tests successfully.
Git integration: Our group's copy of Apache Tika was outdated, so the first pull request included unrelated changes. I created a new branch from the latest official code and resolved a changelog conflict.

03 Lesson & outcome

Keep forks current; test the bug before and after. Upstream PR #3376 is merged.
